

Software Idea: AI Mock Interview & Tutor Booking Marketplace

1. Project Overview

This software will be a complete **Tutor Marketplace + Interview Booking + AI Mock Interview Platform**. Tutors can create interview sessions or available slots, and students can book sessions based on date, time, category, and price.

The platform will work like a combination of:

- Tutor Marketplace
- Calendly-style Scheduling System
- Zoom/WebRTC Video Interview System
- AI Mock Interview Evaluation Platform
- Wallet & Commission-based Earning System

The main goal is to help students prepare for real interviews by booking live sessions with tutors, trainers, interviewers, or organizations.

2. Main User Roles

Student

Students can register, browse available interview slots, book sessions, make payment, join video interviews, receive reminders, submit feedback, and view performance reports.

Tutor

Tutors can register, apply for verification, create interview sessions, manage availability, conduct interviews, receive earnings, view bookings, and request withdrawal.

Organization

Organizations can create hiring/interview programs, assign interviewers, manage candidates, and review reports.

Admin

Admin can manage users, tutors, bookings, payments, reports, categories, notifications, platform commission, and disputes.

Super Admin

Super Admin has full system control including role management, settings, payment gateway configuration, security logs, and platform analytics.

3. Core Software Flow

Tutor Interview Booking Flow

Step 1: Tutor Creates Interview Slot

Tutor will create an interview session with the following information:

- Interview Title
- Category
- Date
- Start Time
- Duration
- Price
- Description
- Meeting Type
- Meeting Link
- Status

Example categories:

- HR Interview
- Cyber Security
- DevOps
- Software Engineering
- IELTS Speaking
- Networking
- Career Counseling

API Example

POST /api/tutor/interview-slots

Database Table: interview_slots

Field	Description
id	Unique slot ID
tutor_id	Tutor ID
title	Interview title

Field	Description
category_id	Interview category
date	Interview date
start_time	Start time
duration	Session duration
price	Session price
status	Available, Booked, Cancelled, Completed
meeting_link	Auto generated meeting URL
created_at	Created date

Step 2: Student Books Interview Slot

Student can browse all available interview slots and book a suitable session.

Student can filter by:

- Category
- Tutor
- Price
- Date
- Time
- Rating
- Language
- Experience level

API Example

GET /api/interview-slots

POST /api/bookings

Database Table: bookings

Field	Description
id	Booking ID
slot_id	Interview slot ID
student_id	Student ID
tutor_id	Tutor ID

Field	Description
booking_status	Pending, Confirmed, Cancelled, Completed
payment_status	Pending, Paid, Failed, Refunded
created_at	Booking date

Step 3: Payment Confirmation

After booking, the student will complete payment using available payment gateways.

Supported payment gateways:

- bKash
- Nagad
- SSLCommerz
- Stripe
- Bank Payment

Payment Flow:

Student Pays → Payment Verified → Booking Confirmed → Meeting Room Created → Tutor & Student Notified

Step 4: Auto Meeting Room Creation

When booking is confirmed, the system will automatically create a video meeting room.

Example meeting URL:

<https://app.domain.com/interview/room/ABC123>

Video meeting features:

- WebRTC video call
 - Audio call
 - Screen sharing
 - Live chat
 - Recording
 - Participant tracking
 - Session timer
 - Join/leave logs
-

Step 5: Automatic Reminder System

The system will automatically send reminders before the interview starts.

Reminder schedule:

- 24 hours before
- 1 hour before
- 30 minutes before
- 5 minutes before

Notification channels:

- Email
 - SMS
 - WhatsApp
 - Mobile push notification
 - In-app notification
-

4. 30-Minute Reminder Example

Student Notification

Your interview with Mr. Rahim will start in 30 minutes.

Date: 01-Jun-2026

Time: 08:00 PM

Join Now: <https://app.domain.com/interview/room/ABC123>

Tutor Notification

You have an interview scheduled in 30 minutes.

Student: Boney Yamin

Time: 08:00 PM

Please prepare for the session.

5. Laravel Background Scheduler

The system will use Laravel Queue and Scheduler for automatic reminders.

Command:

php artisan schedule:run

The scheduler will run every minute and check upcoming interviews.

Reminder Logic

If `interview_start_time - current_time` is equal to reminder time, then the system will send notification to student and tutor.

Example logic:

if interview starts in 30 minutes: send notification to student send notification to tutor

Recommended Laravel jobs:

- InterviewReminderJob
- BookingConfirmationJob
- PaymentVerificationJob
- MeetingRoomCreateJob
- InterviewCompleteJob
- TutorWalletCreditJob

6. Tutor Earnings & Wallet System

Tutor earnings will work like a marketplace commission model.

Earning Flow

Student Pays → Platform Takes Commission → Tutor Wallet Updated → Tutor Requests Withdrawal → Admin Approves Payout

Example:

Session Price: 1000 BDT

Platform Commission: 15%

Tutor Earning: 850 BDT

Platform Earning: 150 BDT

Main Tables

wallets

transactions

withdraw_requests

payouts

platform_commissions

Wallet Features

- Tutor wallet balance
 - Total earnings
 - Pending balance
 - Withdrawable balance
 - Transaction history
 - Withdrawal request
 - Admin payout approval
-

7. AI Mock Interview Features

The platform can also include AI-powered interview support.

AI Features

- AI question generation
- Resume-based interview questions
- Follow-up question generation
- Speech-to-text transcription
- Answer evaluation
- Communication score
- Confidence score
- Technical score
- Interview summary
- Improvement suggestions

Example AI Flow

Student uploads resume → AI analyzes resume → AI generates questions → Tutor conducts interview → System records answers → AI evaluates performance → Student gets scorecard.

8. Student Dashboard Features

Student dashboard will include:

- Upcoming interviews
- Completed interviews
- Booking history
- Payment history
- Performance score
- AI feedback
- Certificates
- Resume upload

- Notifications
 - Tutor reviews
 - Interview calendar
-

9. Tutor Dashboard Features

Tutor dashboard will include:

- Today's interviews
 - Upcoming bookings
 - Interview slot management
 - Availability calendar
 - Earnings overview
 - Wallet balance
 - Withdrawal requests
 - Student feedback
 - Reviews and ratings
 - Session analytics
-

10. Admin Dashboard Features

Admin dashboard will include:

- Total users
 - Total students
 - Total tutors
 - Pending tutor verification
 - Total bookings
 - Total revenue
 - Platform commission
 - Payment reports
 - Withdrawal requests
 - Refund requests
 - User activity logs
 - Audit logs
 - Security alerts
 - Reports and analytics
-

11. Main Software Modules

1. Authentication Module
2. User Management Module

3. Tutor Management Module
 4. Tutor Availability Module
 5. Interview Slot Module
 6. Booking Module
 7. Calendar Module
 8. Category Module
 9. Video Meeting Module
 10. Payment Module
 11. Wallet Module
 12. Withdrawal Module
 13. Notification Module
 14. Reminder Scheduler Module
 15. Review & Rating Module
 16. AI Question Generator Module
 17. Resume Analysis Module
 18. AI Evaluation Module
 19. Scorecard Module
 20. Feedback Module
 21. Reports & Analytics Module
 22. Admin Module
 23. Organization Module
 24. Audit Log Module
 25. Certificate Module
-

12. Suggested Technology Stack

Backend

Laravel 12
MySQL
Redis Queue
Laravel Scheduler
Laravel Sanctum or Passport
WebSocket for real-time features

Frontend

React.js / Next.js
Tailwind CSS
Admin dashboard UI
Student dashboard
Tutor dashboard

Mobile App

Flutter or React Native

Video System

WebRTC
Jitsi Meet integration
Daily.co
Agora
Zoom API

Notification System

Email SMTP
SMS Gateway
WhatsApp API
Firebase Push Notification
In-app notification

Payment Gateway

SSLCommerz
bKash
Nagad
Stripe

13. MVP Version Features

For first version, build only the most important features:

MVP Features

- Student registration/login
- Tutor registration/login
- Tutor profile
- Tutor interview slot creation
- Student slot browsing
- Booking system
- Payment confirmation
- Auto meeting link generation
- Email notification
- Basic reminder system
- Tutor wallet
- Admin dashboard
- Review and rating

After MVP completion, add AI interview evaluation, resume analysis, recording, certificates, and organization module.

14. Future Advanced Features

- AI interview bot
 - Resume scoring
 - Auto-generated interview report
 - Live transcription
 - Interview recording playback
 - Organization hiring campaign
 - Subscription plans
 - Coupon system
 - Referral system
 - Tutor ranking algorithm
 - Dispute management
 - Refund system
 - Certificate generation
 - Mobile app
 - Multi-language support
 - Real-time analytics
-

15. Final Software Concept

This system will be a professional **AI Mock Interview & Tutor Marketplace Platform** where tutors can sell interview sessions, students can book based on schedule and category, and the system automatically manages payment, reminders, video meeting, feedback, scorecard, and tutor earnings.

It can be used by:

- Students
- Job seekers
- Freelancers
- Training centers
- Universities
- IT institutes
- HR teams
- Organizations

This platform can become a complete SaaS business model for interview preparation, career development, and skill assessment.
